Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 04 March 2005.
 2a) This action is FINAL. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

Claim Objections

1. Claims 4-6, 8-15 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim *cannot depend from any other multiple dependent claim*. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 112

2. Claims 12 and 17 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 12 and 17, the phrase "to transmit at least some, preferably all..." renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

To expedite the prosecution of this case, it is assumed that some of the signals are needed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3, 7, 16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Azawa (US 2002/0103839).

5. With respect to claim 1, figure 12 of Azawa discloses an apparatus having function cell means for executing algebraic and/or logic functions (47) and memory cell means (46) to receive, store and/or output information, wherein function cell-memory cell combinations are formed in which a control connection leads from the function cell means to the memory cell means.

The recitation (a cell element field for data processing) has not been given patentable weight because it has been held that a preamble is denied the effect of a limitation where the claim is drawn to a structure and the portion of the claim following the preamble is a self-contained description of the structure not depending for completeness upon the introductory clause. *Kropa v. Robie*, 88 USPQ 478 (CCPA 1951).

6. With respect to claim 2, figure 12 of Azawa teaches a processor (41), coprocessor and/or microcontroller forms a plurality of units such as function cells and/or memory cells whose function and/or interconnection is/are reconfigurable and/or preselectable.

7. With respect to claim 3, figure 12 of Azawa discloses the function cells are formed as arithmetic logic units.

8. With respect to claim 7, figure 12 of Azawa discloses the memory cells are designed for sending stored information directly and/or indirectly to a bus (read_dat) leading to the function cell in response to triggering by the function cell, which controls them.

9. With respect to claim 16, the method as claim is inherent in the apparatus of Azawa as shown in the above rejections.

10. With respect to claim 17, figure 12 of Azawa discloses read and write signals.
